

10.5 Surface Areas of Prisms and Cylinders

Goal: Find the surface areas of prisms and cylinders.

In your textbook, every prism is a *right prism*, which means that the edges connecting the bases are perpendicular to the bases.

Vocabulary

Surface area of a solid: the sum of the areas of the faces

Net: 2-D drawing of a 3-D shape

Lateral faces of a prism:

Lateral area of a prism:

Lateral surface of a cylinder:

Lateral area of a cylinder:

Example 1 Using a Net to Find Surface Area

A storage chest has the shape of a rectangular prism. The net represents the storage chest. Use the net to find the surface area of the storage chest.

- Find the area of each face.

Area of a rectangular face: $4 \cdot 3 = 12 \text{ ft}^2$

Area of a square face: $3 \cdot 3 = 9 \text{ ft}^2$

- Find the sum of the areas of the faces.

$$(4 \cdot 3) + (2 \cdot 9) = 60 \text{ ft}^2$$

$$48 + 18 = 60 \text{ ft}^2$$

Answer: The surface area of the storage chest is 60 square feet

The formula applies to any prism. When finding the surface area of a rectangular prism, you can substitute lw for B and $2l + 2w$ for P . So, the formula becomes $S = 2lw + (2l + 2w)h$.

Surface Area of a Prism

Words The surface area S of a prism is the sum of twice the base area B and the product of the base perimeter P and the height h .

Algebra $S = 2B + Ph$

Numbers $S = 2(6 \cdot 4) + [2(6) + 2(4)]10 = 248$ square units

$f/b: 6 \cdot 10 = 60 \cdot 2 = 120$
 $l/b: 6 \cdot 4 = 24 \cdot 2 = 48$
 $l/r: 4 \cdot 10 = 40 \cdot 2 = 80$

248 units^2

Example 2 Using a Formula to Find Surface Area

Find the surface area of the prism.

The bases of the prism are right triangles.

triangles: $A = \frac{1}{2} \cdot b \cdot h$

$= \frac{1}{2} \cdot 12 \cdot 5$

$= 30 \cdot 2 = 60 \text{ in}^2$

↑
2 triangles

Write formula for surface area.

Substitute.

base: $12 \cdot 20 = 240 \text{ in}^2$

Simplify.

back: $5 \cdot 20 = 100 \text{ in}^2$

top: $13 \cdot 20 = 260 \text{ in}^2$

$+$
 660 in^2

~~$S = 2B + Ph$~~

Answer: The surface area of the prism is

In your textbook, all cylinders are *right cylinders*, which means that the segment connecting the centers of the bases is perpendicular to the bases.

Surface Area of a Cylinder

Words The surface area S of a cylinder is the sum of twice the base area B and the product of the base circumference C and the height h .

Algebra $S = 2B + Ch = 2\pi r^2 + 2\pi rh$

Numbers $S = 2\pi(4)^2 + 2\pi(4)(10) \approx 352$ square units

Example 3 Using a Formula to Find Surface Area

Soup Can Find the surface area of the can of soup. Round your answer to the nearest tenth of an inch.

7.06 ↑
 $C = \pi d$
 $C = 2\pi r$

① $A = \pi \cdot r^2$
 $= \pi \cdot 1.5^2$
 $= 7.1 \times 2 = 14.2 \text{ in}^2$
 ↑ circles

② $C = \pi \cdot 3 = 9.4$

③ $9.4 \cdot 5 = 47 \text{ in}^2$

④ $14.2 + 47$

61.2 in²

Solution

The radius is one half of the diameter, so $r = 1.5$ inches.

$S = 2\pi r^2 + 2\pi rh$

$= 2\pi(\text{ })^2 + 2\pi(\text{ })(\text{ })$

$= \text{ } \pi$

$\approx \text{ }$

Write formula for surface area of a cylinder.

Substitute.

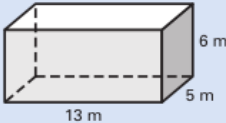

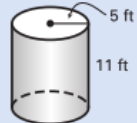

Simplify.

Evaluate. Use a calculator.

Although you used 3.14 as an approximation for π previously, you can obtain a more accurate approximation by using the π key on a calculator.

Answer: The surface area of the can of soup is about

Checkpoint Find the surface area of the prism or cylinder. Round to the nearest whole number.

<p>1. </p>	<p>2. </p>
--	---

Area of cylinder

- ① find area of circle
• double it
- ② find circumference of circle
(this is the rectangle's length)
- ③ circumference x height,
(this is the rectangle's area)
- ④ add
