

8.2 Linear Equations in Two Variables

Goal: Find solutions of equations in two variables.

Vocabulary

Equation in two variables:

Solution of an equation in two variables:

Graph of an equation in two variables:

Linear equation:

an equation that, when graphed, forms a line
ex: $y = \frac{1}{4}x + 4$

Function form:

Example 1 Checking Solutions

Tell whether $(5, -1)$ is a solution of $x - 3y = 8$.

Solution

$$x - 3y = 8$$

Write original equation.

$$5 - 3(-1) \stackrel{?}{=} 8$$

Substitute for x and for y .

$$5 + 3 = 8$$

Simplify.

Answer: $(5, -1)$ is a solution of $x - 3y = 8$.

linear equation
↓

Checkpoint Tell whether the ordered pair is a solution of $2x - y = 5$.

1. (0, -5)	2. (3, 2)	3. (-2, -9)
------------	-----------	-------------

X	$y = -x + 1$	Y
-2	2 + 1	3
-1	+ 1 + 1	2
0	0 + 1	1
1	- 1 + 1	0
2	- 2 + 1	-1

Example 2 Graphing a Linear Equation

Graph $y = -x + 1$.

1. Make a table of solutions.

x	-2	-1	0	1	2
y	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>

2. List the solutions as ordered pairs.

$(-2, 3)$, $(-1, 2)$, $(0, 1)$,
 $(1, 0)$, $(2, -1)$

3. Graph the ordered pairs, and note that the points lie on a . Draw the , which is the graph of $y = -x + 1$.

Example 3 Graphing Horizontal and Vertical Lines

Graph $y = -2$ and $x = 3$.

a. The graph of the equation

$y = -2$ is

b. The graph of the equation

$x = 3$ is

x	$3x - 2$
-1	$3(-1) - 2$ $-3 - 2$ -5
0	$3(0) - 2$ $0 - 2$ -2
1	$3(1) - 2$ $3 - 2$ 1
2	$3(2) - 2$ $6 - 2$ 4

Example 4 Writing an Equation in Function Form

Write $3x - y = 2$ in function form. Then graph the equation.

To write the equation in function form, solve for y .

$3x - y = 2$ Write original equation.

$-y = -3x + 2$ Subtract $3x$ from each side.

$y = 3x - 2$ Multiply each side by -1 .

To graph the equation, use its function form to make a table of solutions. Graph the ordered pairs (x, y) from the table, and draw a line through the points.

x	-1	0	1	2
y	-5	-2	1	4

Checkpoint

4. Graph $y = 4$ and $x = -3$. Tell whether each equation is a function.

5. Write $x - 2y = 4$ in function form. Then graph the equation.
